ABSTRACT OF THE DISCLOSURE

A suet bird feeder system for efficiently providing suet plugs for birds to consume. The suet bird feeder system includes a housing unit having at least one opening with a rear wall and a straight or tapered inner wall, a support member extending from the rear wall, and a suet plug having a tapered sidewall formed to fit within the opening. A storage tray preferably has a plurality of storage cavities having a tapered structure for receiving and storing the suet plugs prior to insertion within the opening.
